No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                    The invention concerns an isolated canine protein, preferably canine receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and sethods of isolating regulators between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence encodes a protein of the invention.
                     protein useful for regulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                          The invention concerns an isolated canine protein, preferably canine immunoglobulin G (1gG) protein or canine interleukin 13 (II-13)
receptor protein, the nucleic acids encoding them, antibodies
raised against them, fusion proteins between the 1gG and IL-13R proteins
and methods of isolating regulators of them. The regulators are useful
for regulating an immune response in a canine. The proteins useful to
develop regulatory compounds including inhibitors and activators that,
when administered to a canine in an effective manner, are capable of
protecting canine from disease mediated by IL-13Ralpha or IL-13. The
regulators are useful for treating canine 1gG (heavy and/or light chain)
and/or canine IL-13R mediated responses. The molecules of the invention
are useful to regulate the immune response of an animal (e.g. by gene
therapy). The present sequence is the reverse complement of a cDNA
encoding a protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IGG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene

The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IGC heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                               The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence encodes a protein of the invention.
                                                                                                                                                                                                                                                                                                                      Novel isolated canine protein, preferably canine immunoglobulin g
protein or canine interleukin-13 receptor protein useful for regulating
immune response of an animal and for developing regulatory compounds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                        Immunoglobulin G (1965) protein or canine interleukin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, tusion proteins between the 196 and IL-131 proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                  Novel isolated canine protein, preferably canine immunoglobulin {\tt G} protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -

The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleukin-13 (IL-13) (IC-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, the nucleic acids encoding them, antibodies and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG havy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulators encodes a protein of the invention.
                                              Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds
                                                                                                                                                     Claim 19; Page 184-185; 221pp; English.

The invention concerns an isolated canine protein, preferably canine immunoglobulin (G IgG) protein or canine interlewin-13 (LL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dog; interleukin-13 receptor alphal; interleukin-13 receptor alpha2; IL-13Ralpha1; IR-13Ralpha2; Immunoglobulin heavy chain; IgG Fc; Immunoglobulin light chain; lambda; ss; immunosuppressive; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated canine protein, preferably canine immunoglobulin G
protein or canine interleukin-13 receptor protein useful for regulating
immune response of an animal and for developing regulatory compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Canine IL-13R extracellular domain cDNA nCaIL-13Ralpha2 954 complement.

The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Rapha or IL-13. The regulators are useful for treating canine IGG (heavy and/or light chain and/or canine IL-13R mediated responses. The molecules of the invention

The invention concerns an isolated canine protein, preferably canine immunoglobulin G (IgG) protein or canine interleavin-13 (IL-13) receptor protein, the nucleic acids encoding them, antibodies raised against them, fusion proteins between the igG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention are useful to regulate the immune response of an animal (e.g. by gene therapy). The present sequence is the reverse complement of a cDNA encoding a protein of the invention.
                                                                                                                                                                                                                                                                      Novel isolated canine protein, preferably canine immunoglobulin G protein or canine interleukin-13 receptor protein useful for regulating immune response of an animal and for developing regulatory compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1264

raised against them, fusion proteins between the IgG and IL-13R proteins and methods of isolating regulators of them. The regulators are useful for regulating an immune response in a canine. The proteins useful to develop regulatory compounds including inhibitors and activators that, when administered to a canine in an effective manner, are capable of protecting canine from disease mediated by IL-13Ralpha or IL-13. The regulators are useful for treating canine IgG (heavy and/or light chain) and/or canine IL-13R mediated responses. The molecules of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1026
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1086
